OBJECTIVE

Computer Science student at BINUS University specializing in Database Technology, with a strong focus on data engineering, analytics, and machine learning. Proficient in SQL, Python, PySpark, Excel, and visualization tools including Tableau and Power BI.

EDUCATION

BINUS University | Computer Science 2024 - present
Undergraduate Computer Science Major
GPA : 3.5/4.00

WORK EXPERIENCE

BINUS Group Aug 2024 - present
Promotion Marketing Team - Part Time

- Delivered direct presentations and pitching of BINUS University programs to prospective students across 40+ high schools and supported 50+ education fairs, school events, and campus visits.
- Supported the preparation and execution of BINUS promotional events, coordinating event needs and on-site activities to ensure smooth event operations.
- Managed outreach and communications through Salesforce, providing prospective students with information on university applications and scholarship updates.

ORGANIZATIONAL EXPERIENCE

Teach for Indonesia Student Community Des 2024 - present
Head of Logistics & Tutor

- Led logistics operations across 20+ teams for an educational program, strategically coordinating teaching materials, resources, and operational needs to ensure smooth execution.
- Taught English to 50+ children, fostering an engaging learning environment while adapting lessons to different learning needs.

Freshman Leader B2030 Jul 2026 - Sep 2026

- Mentored and supported 50+ freshmen as part of a 5-member team, guiding their transition into university life and monitoring their participation throughout the orientation program.

PROJECT EXPERIENCE

Big Data Processing, Brooklyn Air Quality Monitoring & Predictive Analytics Apr 2026
Tools: Python (PySpark, Hadoop, Matplotlib), SQL, Tableau

- Built an end-to-end Big Data pipeline using Hadoop HDFS and HBase for scalable air quality data ingestion and storage.
- Processed raw datasets with PySpark, applying feature engineering and SMOTE balancing to resolve class imbalance.
- Trained a Random Forest Classifier via PySpark MLlib, achieving 95.4% accuracy in predicting pollution trends.

Data Analytics, Brazilian E-Commerce Data Analytics (Olist) Apr 2026
Tools: Python, SQL, Tableau

- Cleaned and transformed e-commerce transaction data using Python (Pandas) and SQL queries.
- Built interactive Tableau dashboards to analyze customer behavior, delivery logistics, and sales performance.

SKILLS

Languages & Databases - SQL (MySQL), Python, PySpark
Data Visualization - Tableau, Power BI, Excel
Analytics - Exploratory Data Analysis (EDA), Data Cleaning, Predictive Modeling
